CI/CD Log Analyzer Report

=====

Source file: sample_logs/jenkins_failed.log

Total lines: 13

Status: FAILED

Highest severity: high

Summary by category:

- Docker: 1
- Infrastructure: 2
- Network / DNS: 1
- Network / Proxy: 1
- Tests: 1

Findings:

- [HIGH] Network / Proxy / PROXY_407 at line 4
Evidence: ProxyError: 407 Proxy Authentication Required while connecting to Artifactory
Recommendation: Check HTTP_PROXY/HTTPS_PROXY and Docker daemon proxy configuration.
- [HIGH] Infrastructure / DISK_SPACE at line 11
Evidence: Filesystem /var/lib/docker Use% 100% used
Recommendation: Clean workspace/Docker cache or increase disk size on the build agent.
- [HIGH] Infrastructure / DISK_SPACE at line 12
Evidence: ERROR: No space left on device
Recommendation: Clean workspace/Docker cache or increase disk size on the build agent.
- [MEDIUM] Docker / DOCKER_DAEMON at line 6
Evidence: ERROR: docker pull failed for registry.example.com/demo/build-image:3.5
Recommendation: Check Docker service status, registry access, and daemon proxy settings.
- [MEDIUM] Network / DNS / DNS_RESOLUTION at line 7
Evidence: Temporary failure in name resolution for artifactory.internal.example
Recommendation: Verify DNS configuration, VPN/corporate network access, and Artifactory host name.
- [MEDIUM] Tests / TEST_FAILURE at line 9
Evidence: FAILED tests/test_pipeline.py::test_artifact_upload
Recommendation: Open the failing test output and reproduce locally before retrying the pipeline.
